## *KKSP Precision Machining LLC*

### *Operations News*

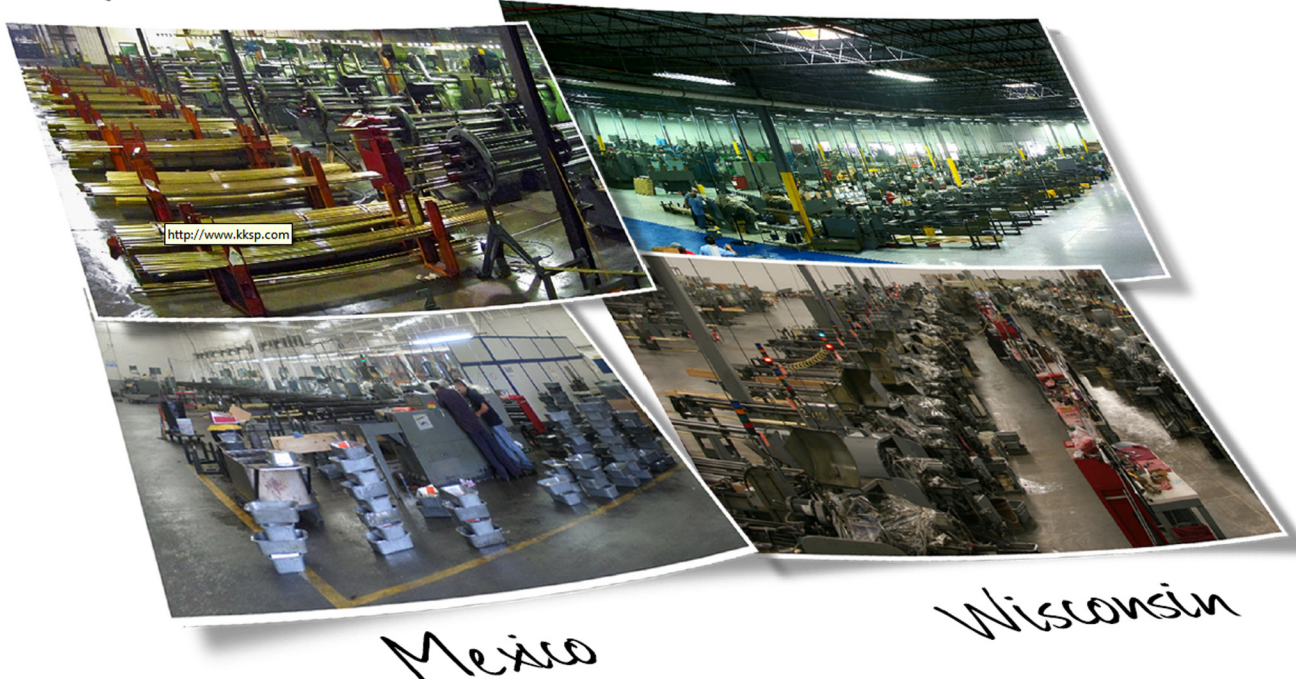

---

KKSP Precision Machining is North America's largest manufacturer of moderately complex turned metal parts using screw machines. We have four manufacturing locations, all of which are TS 16949 and ISO 9001 & 14001 certified. These manufacturing plants are located strategically throughout the Midwest and Mexico. Each is staffed with trained operators and a management and technical team that have the knowledge, skills, and the desire to grow these operations.

A look into our operations should serve to demonstrate our commitment to being the Best of the Best. While we are proud of our operational organization and housekeeping at each location, each of our operations review their most important metrics constantly to ensure we are meeting the standards set by our customers. From ongoing TS & ISO audits, efficiencies and scrap to environmental reviews and preventative maintenance, KKSP is committed to maintaining the highest degree of performance for our customers.
